

## Dale Medical, one of the first to install permanent UV-C fixtures in the OR.

**Reference:** Kayla Hill, Director of Surgical Services

Dale Medical Center is in Ozark, AL and mainly serves rural communities. It has 89 beds, 35 multi-specialty physicians and 360 employees. In addition, to inpatient medical and surgical facilities, the hospital has a special unit for patients with mental illness, a state-of-the-art CAT scan unit, a high field MRI unit, an outpatient therapy clinic, and outpatient surgery center and a STATMED urgent care center.

At the beginning of the pandemic, Dale Medical invested in RD-UVC Mobile systems to disinfect patient care spaces from Covid. True believers in the technology, a year later, Dale Medical decided to invest in **RD-Fx™ UV-C Fixed Mount Systems for all three of their OR suites in the surgery center.** The fixtures deliver an ultra-fast, properly effective UV dose for killing harmful pathogens when disinfecting any patient treatment space – without having to be moved or positioned with each use. Their **OR Suite can be disinfected between patient cases in as little as 2 minutes.**

**Kayla Hill, Director of Surgical Services says,** "I would highly recommend the product to healthcare colleagues. It is very easy to use, minimal errors, and has excellent disinfection rates. It's a great product to add to daily cleaning of operating rooms."

## What benefit does the RD-Fx™ System bring the OR team?

Kayla Hill adds, "We are proud of our low infection rates and strive to continue to obtain those. The UV-C solution is helping us continue to provide that to our patients." Operation of the ceiling-mounted RD-Fx™ Fixed Mount System is simple and **does not have to be moved or positioned with each use**. Its powerful, cloud-based reporting system – uniquely configured for your space by our Steriliz UVC experts – provides unrivaled accountability and compliance reporting. Staff is now able to **'FLASH TREAT' the room between cases, eradicating pathogens on all surfaces as well as the AIR – at a push of a button – in under 2 minutes!**

When asked what made her choose the UV-C fixtures as a solution, Kayla Hill said "I liked the ease of use and the high disinfection rate. Using the system is very easy. Simply a push of a button." After each procedure, complete a manual clean like you normally would do. **Exit the room, close the door, enter a user-specific PIN, select the dose desired.** The display shows a countdown and indicates when the process is complete. Disinfection data (room, date, time, user, duration, delivered dose, etc.) is posted to your cloud portal in real time. When completed, the room is immediately available for your next patient.

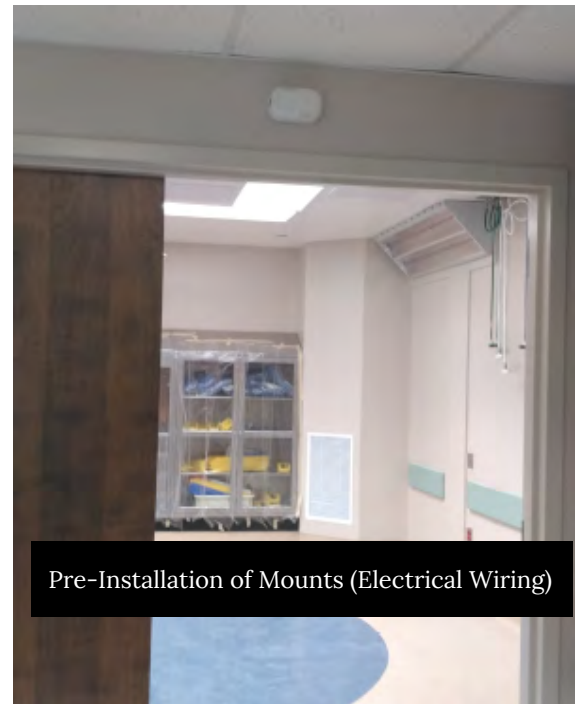

### About the companies:

**Data Distributing LLC** is a healthcare IT solutions company serving over 2,000 hospitals across the United States since 1984. At the beginning of the pandemic, Data Distributing researched the best UV-C disinfection systems and chose to partner with Steriliz, makers of the RD UVC Mobile System and the RD-Fx™ Fixed Mount System. Both systems have been deployed at customer sites, helping to reduce the spread of COVID to both their patients and staff.

**Steriliz LLC** is a leader in UV-C disinfection and the manufacturer of the RD-UVC Mobile System and the RD-Fx™ Fixed Mount System. The key differentiator regarding the RD systems is their use of patented remote wireless sensors that measure and report the actual dose of UV-C energy delivered to targeted areas in the space being disinfected. This process is the only way to definitively determine when the proper amount of UV-C energy has been delivered thereby providing a safer environment in the shortest possible time.

“

I would 'highly recommend' the Steriliz UV-C Fixed Mount Systems.
